

Elstree School Automated Gate Installation

SCS have completed the design and installation of automated gates at Elstree School. To which Pru Hardwick quotes "The new gates will be great extra security for the school"

When installing automated gates there are various different mechanisms that can be used. In this installation we have opted for the FAAC 760 underground closer.

An important criterion for this system was that the gates were to be designed to a unique style to match an existing set of ornate gates.

This project was awarded to Security Control Systems from Entric Services an Electrical Contracting company based at Victoria Court, 64 Victoria Road, Mortimer Common, Berkshire.

There are many different options for gate access including:-

- Hand held radio transmitters
- Audio/Video/Telguard
- Intercoms
- Proximity Tokens
- Vehicle Loops
- Trades Buttons & Fireman
- Switches

All of which are designed in accordance with the gate system.
